

Q-Q analysis — per-stack normality + distributional equality between stacks (h=3, seed-mean residuals)

Classical H=4 — Q-Q vs Normal
Shapiro W=0.892, p=1.64e-05

QLNN 4q/3L — Q-Q vs Normal
Shapiro W=0.885, p=8.91e-06

Two-sample Q-Q: Classical H=4 vs QLNN 4q/3L
KS D=0.085, p=0.964 (cannot reject H_0 equal distributions)
