

P7 — H3 mechanism: T3 circuit properties x per-cell Δ
(post-H1-FALSIFIED: which property predicts the INVERTED regime advantage?)

Cross-tabulation: per-cell Δ vs T3 scalar of best-ansatz

T3 scalar	best-ansatz values across 9 cells	Spearman ρ	p-value
KL to Haar	0.19, 0.21, 0.21, 0.21, 0.21 ...	+0.518	0.154
Entangling Q	0.78, 0.8, 0.31, 0.8, 0.8 ...	+0.179	0.644
Var(grad)	0.038, 0.025, 0.046, 0.025, 0.025 ...	-0.179	0.644
Fourier K_max	3, 3, 3, 3, 3 ...	undefined	(no variance)

(green = $p < 0.05$; pink = $p < 0.20$; gray = no signal; n=9 cells)
