

Per-system QLNN-vs-reference trajectories (seed 0, first state component)

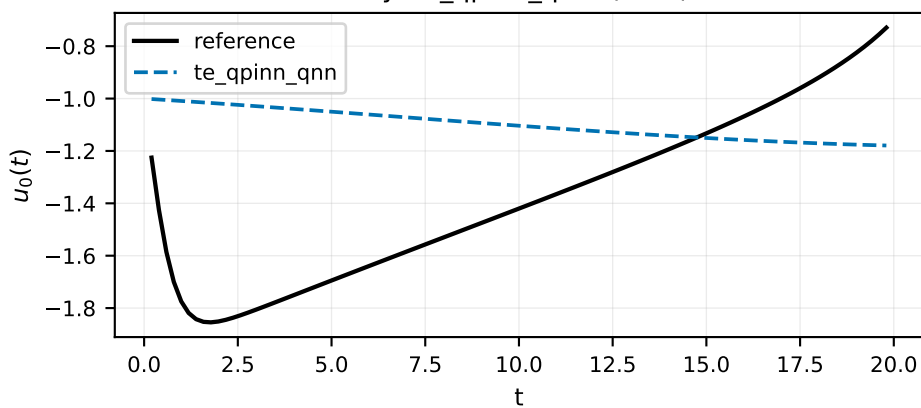

Lotka-Volterra [S, predator-prey]
best family: qcpinn, $\langle \text{relL}^2 \rangle = 0.0058$

Van der Pol [S, limit cycle]
best family: te_qpinn_fnn, $\langle \text{relL}^2 \rangle = 0.835$

FitzHugh-Nagumo [B, fast-slow]
best family: te_qpinn_qnn, $\langle \text{relL}^2 \rangle = 0.337$

Lorenz [B, chaotic]
best family: te_qpinn_qnn, $\langle \text{relL}^2 \rangle = 0.978$
